

The Vest[®] Airway Clearance System, Model 205

Breathe a Little Easier.[™]

Enhancing outcomes for
patients and their caregivers:

Hill-Rom

How does The Vest® Airway Clearance System work?

Through High Frequency Chest Wall Oscillation technology, The Vest® Airway Clearance System dislodges mucus from the bronchial walls, and mobilizes secretions and mucus from the smaller to larger airways where it can be cleared by coughing or suctioning.

Simple, flexible programming

What does The Vest[®] System mean to clinicians?

Designed with Acute and Long-Term Respiratory Care in mind, The Vest[®] Airway Clearance System provides clinicians with the following advantages:

Easy

- No need to reposition the patient compared to CPT.
- Reduces average therapy time compared to CPT.¹
- Increased compliance to therapy compared to CPT in pediatric patients.^{2,3}

Safe

- Proven to be at least as safe as CPT.⁴
- No need to change head-of-bed into Trendelenburg position.
- Disposable Single Patient Use options.

Effective

- Mobilizes secretions as well as CPT.^{5,6,7}
- Provides consistent therapy every time.

What Studies Show

The Vest® Airway Clearance System, the original High Frequency Chest Wall Oscillation (HFCWO) device, has been in use since 1988. With over 80 clinical studies having been conducted in Acute Care, Long-Term Care and Home Care, it is the most researched HFCWO system on the market today.

Commercial Claims*

10.0% 

overall Per Member Per Month (PMPM) claim costs *(excluding RX)*.

Commercial Medicare Combined

The analysis covered 446 neuromuscular disease patients that had received HFCWO therapy between 2007 and 2009 comparing health care costs incurred before and after HFCWO therapy intervention. The results of the study show lower claim costs for patients with neuromuscular disorders after the initial insurance claim for HFCWO.

What types of patients may benefit?

The Vest® Airway Clearance System has been demonstrated to benefit patients in the removal of retained secretions due to both acute and chronic respiratory conditions.

Secretion retention associated with impaired ventilation and/or gas exchange:

- Atelectasis, pulmonary infiltrates or pneumonia
- Mechanical ventilation
- Acute respiratory distress syndrome (ARDS)
- Pulmonary insufficiency

Ineffective cough or secretion clearance due to immobility, deconditioning or muscle weakness:

- Obesity
- Cerebral palsy
- Quadriplegia and/or Quadripareisis
- Dyspnea
- Motor neuron disease
- Muscular dystrophies and other myopathies

Airway clearance dysfunction resulting in impaired ventilation and/or gas exchange:

- Bronchiectasis
- Chronic Bronchitis
- Cystic Fibrosis
- Emphysema
- Chronic Obstructive Pulmonary Disease (COPD)

The Vest® Airway Clearance System is not intended to treat any specific underlying disease or condition, but rather to provide Airway Clearance Therapy. Physicians have prescribed The Vest® Airway Clearance System for patients with the conditions noted above. Numerous clinical studies document the effectiveness of The Vest® Airway Clearance System in mobilizing secretions.

What hospital departments or units may use The Vest® Airway Clearance System?

- Respiratory Care
- Nursing
- Critical Care
- Physical Therapy
- ICU
- Sub Acute Unit
- Surgical/Post Surgical Unit
- Step Down Unit

Ordering The Vest® System Therapy for Acute Care Use

3 programs to choose from:

- Purchase Program
- Lease to Own Programs
- Rental Program
